FORM & CHARACTER - DEVELOPMENT PERMIT GUIDEN NESA

Chapter 2 - The Design Foundations: apply to all projects and provide the overarching principles for supporting creativity, innovation and design excellence in Kelowna.

- Facilitate Active Mobility
- Use Placemaking to Strengthen Neighbourhood Identity
- Create Lively and Attractive Streets & Public Spaces
- Design Buildings to the Human Scale
- Strive for Design Excellence

The General Residential and Mixed Use Guidelines: provide the key guidelines that all residential and mixed use projects should strive to achieve to support the Design Foundations.

 The General Guidelines are supplement by typology-specific guidelines (e.g., Townhouses & Infill on page 18-19, High-Rise Residential and Mixed-Use on page 18-42), which provide additional guidance about form and character.

Chapter 2 - Design Foundations Apply To All Projects Page 18-8

Chapter 4 Low & Mid-Rise Residential & Mixed Use

Page 18-34

Chapter 5 High-Rise Residential & Mixed Use

Page 18-42

*Note: Refer to the Design Foundations and the Guidelines associated with the specific building typology.

Consideration has been given to the following guidelines as identified in Chapter 18 of the City of Kelowna 2040 Official Community Plan:

	SECTION 2.0: GENERAL RESIDENTIAL AND MIX	KED US	Ε				
	TE PROPOSALS COMPLIANCE TO PERTINENT GUIDELINE	N/A	1	2	3	4	5
	s least complying & 5 is highly complying)	14/7	_		3	4)
2.1	General residential & mixed use guidelines					•	
	1 Relationship to the Street	N/A	1	2	3	4	5
a.	Orient primary building facades and entries to the fronting street						/
	or open space to create street edge definition and activity.						
b.	On corner sites, orient building facades and entries to both						/
	fronting streets.						
c.	Minimize the distance between the building and the sidewalk to						/
	create street definition and a sense of enclosure.						_
d.	Locate and design windows, balconies, and street-level uses to						
	create active frontages and 'eyes on the street', with additional						√
	glazing and articulation on primary building facades.						
e.	Ensure main building entries are clearly visible with direct sight						/
	lines from the fronting street.						
f.	Avoid blank, windowless walls along streets or other public open						/
	spaces.						•
g.	Avoid the use of roll down panels and/or window bars on retail and						
	commercial frontages that face streets or other public open						✓
	spaces.						
h.	In general, establish a street wall along public street frontages to						
	create a building height to street width ratio of 1:2, with a						
	minimum ratio of 1:3 and a maximum ratio of 1:1.75.						
•	Wider streets (e.g. transit corridors) can support greater street						
	wall heights compared to narrower streets (e.g. local streets);					./	
•	The street wall does not include upper storeys that are setback					V	
	from the primary frontage; and						
•	A 1:1 building height to street width ratio is appropriate for a lane						
	or mid-block connection condition provided the street wall height						
	is no greater than 3 storeys.						
2.1	2 Scale and Massing	N/A	1	2	3	4	5
a.	Provide a transition in building height from taller to shorter						
	buildings both within and adjacent to the site with consideration						✓
	for future land use direction.						
b.	Break up the perceived mass of large buildings by incorporating	/					
	visual breaks in facades.	•					
c.	Step back the upper storeys of buildings and arrange the massing						
	and siting of buildings to:						
•	Minimize the shadowing on adjacent buildings as well as public					/	
	and open spaces such as sidewalks, plazas, and courtyards; and					V	
•	Allow for sunlight onto outdoor spaces of the majority of ground						
	floor units during the winter solstice.						
	g -	·		1		1	L

2.1	3 Site Planning	N/A	1	2	3	4	5
a.	Site and design buildings to respond to unique site conditions and opportunities, such as oddly shaped lots, location at prominent intersections, framing of important open spaces, corner lots, sites with buildings that terminate a street end view, and views of						✓
1.	natural features.						
b.	Use Crime Prevention through Environmental Design (CPTED) principles to better ensure public safety through the use of appropriate lighting, visible entrances, opportunities for natural surveillance, and clear sight lines for pedestrians.						✓
C.	Limit the maximum grades on development sites to 30% (3:1)	✓					
d. •	Design buildings for 'up-slope' and 'down-slope' conditions relative to the street by using strategies such as: Stepping buildings along the slope, and locating building entrances at each step and away from parking access where possible;						
•	Incorporating terracing to create usable open spaces around the building Using the slope for under-building parking and to screen service	✓					
•	and utility areas; Design buildings to access key views; and						
•	Minimizing large retaining walls (retaining walls higher than 1 m should be stepped and landscaped).						
e.	Design internal circulation patterns (street, sidewalks, pathways) to be integrated with and connected to the existing and planed future public street, bicycle, and/or pedestrian network.	✓					
f.	Incorporate easy-to-maintain traffic calming features, such as on- street parking bays and curb extensions, textured materials, and crosswalks.	✓					
g.	Apply universal accessibility principles to primary building entries, sidewalks, plazas, mid-block connections, lanes, and courtyards through appropriate selection of materials, stairs, and ramps as necessary, and the provision of wayfinding and lighting elements.						✓
	4 Site Servicing, Access, and Parking	N/A	1	2	3	4	5
a.	Locate off-street parking and other 'back-of-house' uses (such as loading, garbage collection, utilities, and parking access) away from public view.						✓
b.	Ensure utility areas are clearly identified at the development permit stage and are located to not unnecessarily impact public or common open spaces.						✓
C.	Avoid locating off-street parking between the front façade of a building and the fronting public street.						✓
d. •	In general, accommodate off-street parking in one of the following ways, in order of preference: Underground (where the high water table allows)						✓
•	Parking in a half-storey (where it is able to be accommodated to not negatively impact the street frontage);						

•	Garages or at-grade parking integrated into the building (located						
	at the rear of the building); and						
•	Surface parking at the rear, with access from the lane or						
	secondary street wherever possible.						
e.							
	the use of permeable materials such as paving blocks, permeable						
	concrete, or driveway planting strips.				✓		
	off note: due to turning movements of vehicles on the rear lane						
	face parking area, permeable paving blocks are not ommended.						
	In cases where publicly visible parking is unavoidable, screen using						
١.	strategies such as:						
•	Landscaping;						
•	Trellises;	\checkmark					
	Grillwork with climbing vines; or						
•	Other attractive screening with some visual permeability.						
	Provide bicycle parking at accessible locations on site, including:						
g. ∙	Covered short-term parking in highly visible locations, such as						
	near primary building entrances; and						1
•	Secure long-term parking within the building or vehicular parking						
•	area.						
h	Provide clear lines of site at access points to parking, site						
	servicing, and utility areas to enable casual surveillance and safety.						✓
i.	Consolidate driveway and laneway access points to minimize curb						
-	cuts and impacts on the pedestrian realm or common open	\checkmark					
	spaces.						
j.	Minimize negative impacts of parking ramps and entrances						
•	through treatments such as enclosure, screening, high quality	\checkmark					
	finishes, sensitive lighting and landscaping.						
2.1	.5 Streetscapes, Landscapes, and Public Realm Design	N/A	1	2	3	4	5
a.	Site buildings to protect mature trees, significant vegetation, and	√					
	ecological features.	V					
b.	Locate underground parkades, infrastructure, and other services	1					
	to maximize soil volumes for in-ground plantings.						
C.	Site trees, shrubs, and other landscaping appropriately to						✓
	maintain sight lines and circulation.						
d.	Design attractive, engaging, and functional on-site open spaces						
	with high quality, durable, and contemporary materials, colors,						✓
	lighting, furniture, and signage.						
e.	Ensure site planning and design achieves favourable microclimate						
	outcomes through strategies such as:						
•	Locating outdoor spaces where they will receive ample sunlight						
	throughout the year;						√
•	Using materials and colors that minimize heat absorption;						
•	Planting both evergreen and deciduous trees to provide a balance						
	of shading in the summer and solar access in the winter; and						
•	Using building mass, trees and planting to buffer wind.						

f.	Use landscaping materials that soften development and enhance the public realm.						✓
g.	Plant native and/or drought tolerant trees and plants suitable for						/
	the local climate.						
h.	Select trees for long-term durability, climate and soil suitability,						✓
	and compatibility with the site's specific urban conditions.						Ľ
i.	Use exterior lighting to complement the building and landscape						
	design, while:						
•	Minimizing light trespass onto adjacent properties;						✓
•	Using full cut-off lighting fixtures to minimize light pollution; and						
•	Maintaining lighting levels necessary for safety and visibility.						
j.	Employ on-site wayfinding strategies that create attractive and						
	appropriate signage for pedestrians, cyclists, and motorists using						✓
	a 'family' of similar elements.						
	.6 Building Articulation, Features and Materials	N/A	1	2	3	4	5
a.	Express a unified architectural concept that incorporates variation						
	in façade treatments. Strategies for achieving this include:						
•	Articulating facades by stepping back or extending forward a						
	portion of the façade to create a series of intervals or breaks;						
•	Repeating window patterns on each step-back and extension interval;						✓
•	Providing a porch, patio, or deck, covered entry, balcony and/or						
	bay window for each interval; and						
•	Changing the roof line by alternating dormers, stepped roofs,						
	gables, or other roof elements to reinforce each interval.						
b.	Incorporate a range of architectural features and details into						
	building facades to create visual interest, especially when						
	approached by pedestrians. Include architectural features such as:						
	bay windows and balconies; corner feature accents, such as turrets						
	or cupolas; variations in roof height, shape and detailing; building						
	entries; and canopies and overhangs.						/
	Total describer of called a the called a Marcon and the other field.						•
	Include architectural details such as: Masonry such as tiles, brick,						
	and stone; siding including score lines and varied materials to						
	distinguish between floors; articulation of columns and pilasters;						
	ornamental features and art work; architectural lighting; grills and railings; substantial trim details and moldings / cornices; and						
	trellises, pergolas, and arbors.						
c.	Design buildings to ensure that adjacent residential properties						
С.	have sufficient visual privacy (e.g. by locating windows to						
	minimize overlook and direct sight lines into adjacent units), as					✓	
	well as protection from light trespass and noise.						
d.	Design buildings such that their form and architectural character						/
	reflect the buildings internal function and use.						V
e.	Incorporate substantial, natural building materials such as			İ	İ		./
	masonry, stone, and wood into building facades.						•
				•	•		

f.	Provide weather protection such as awnings and canopies at			✓
	primary building entries.			•
g.	Place weather protection to reflect the building's architecture.			✓
h.	Limit signage in number, location, and size to reduce visual clutter and make individual signs easier to see.			✓
i.	Provide visible signage identifying building addresses at all entrances.			✓

SECTION 4.0: LOW & MID-RISE RESIDENTIAL M	IXED U	SE				
RATE PROPOSALS COMPLIANCE TO PERTINENT GUIDELINE	N/A	1	2	3	4	5
(1 is least complying & 5 is highly complying)					•	
4.1 Low & mid-rise residential & mixed use guidelines	•	'	•	•	•	
4.1.1 Relationship to the Street	N/A	1	2	3	4	5
i. Ensure lobbies and main building entries are clearly visible from						./
the fronting street.						V
j. Avoid blank walls at grade wherever possible by:						
Locating enclosed parking garages away from street frontages or						
public open spaces;						
Using ground-oriented units or glazing to avoid creating dead						./
frontages; and						•
When unavoidable, screen blank walls with landscaping or						
incorporate a patio café or special materials to make them more						
visually interesting.						
Residential & Mixed Use Buildings						
k. Set back residential buildings on the ground floor between 3-5 m						
from the property line to create a semi-private entry or transition						
zone to individual units and to allow for an elevated front						
entryway or raised patio.						
• A maximum 1.2 m height (e.g. 5-6 steps) is desired for front						✓
entryways.						
Exceptions can be made in cases where the water table requires						
this to be higher. In these cases, provide a larger patio and screen						
parking with ramps, stairs and landscaping.						
I. Incorporate individual entrances to ground floor units accessible						/
from the fronting street or public open spaces.						•
m. Site and orient buildings so that windows and balconies overlook						
public streets, parks, walkways, and shared amenity spaces while						
minimizing views into private residences.					1	
Staff comment: East-facing balconies as designed will overlook					•	
private residence to the east until such time as the property is						
redeveloped.						
4.1.2 Scale and Massing	N/A	1	2	3	4	5
a. Residential building facades should have a maximum length of 60						
m. A length of 40 m is preferred.					✓	
Staff comment: Façade length is between 40 m and 60 m.						

b.	Residential buildings should have a maximum width of 24 m.						✓
c.	Buildings over 40 m in length should incorporate a significant horizontal and vertical break in the façade.						✓
4.1	.3 Site Servicing, Access, and Parking	N/A	1	2	3	4	5
a.	On sloping sites, floor levels should step to follow natural grade		_	_		7)
۵.	and avoid the creation of blank walls.	✓					
b.	Site buildings to be parallel to the street and to have a distinct						
	front-to-back orientation to public street and open spaces and to						
	rear yards, parking, and/or interior court yards:						
•	Building sides that interface with streets, mid-block connections						
	and other open spaces and should positively frame and activate						✓
	streets and open spaces and support pedestrian activity; and						
•	Building sides that are located away from open spaces (building						
	backs) should be designed for private/shared outdoor spaces and						
	vehicle access.						
C.	Break up large buildings with mid-block connections which should						
	be publicly-accessible wherever possible.	\checkmark					
d.	Ground floors adjacent to mid-block connections should have	✓					
	entrances and windows facing the mid-block connection.						
	.4 Site Servicing, Access and Parking	N/A	1	2	3	4	5
a.	Vehicular access should be from the lane. Where there is no lane,						
	and where the re-introduction of a lane is difficult or not possible,						
	access may be provided from the street, provided:						
•	Access is from a secondary street, where possible, or from the						✓
	long face of the block;						
•	Impacts on pedestrians and the streetscape is minimised; and						
•	There is no more than one curb cut per property.						
b.	Above grade structure parking should only be provided in						
	instances where the site or high water table does not allow for						
	other parking forms and should be screened from public view with						✓
	active retail uses, active residential uses, architectural or						
	landscaped screening elements.						
C.	Buildings with ground floor residential may integrate half-storey						
	underground parking to a maximum of 1.2 m above grade, with						
	the following considerations:						
•	Semi-private spaces should be located above to soften the edge						/
	and be at a comfortable distance from street activity; and						V
•	Where conditions such as the high water table do not allow for this						
	condition, up to 2 m is permitted, provided that entryways, stairs,						
	landscaped terraces, and patios are integrated and that blank						
	walls and barriers to accessibility are minimized.	NI/A			_		_
	.5 Publicly-Accessible and Private Open Spaces	N/A	1	2	3	4	5
a.		./					
	courtyards accessible and available to the public) with public open	✓					
	areas to create seamless, contiguous spaces.	<u> </u>		<u> </u>			<u> </u>

b.	Locate semi-private open spaces to maximize sunlight						
	penetration, minimize noise disruptions, and minimize 'overlook'						✓
	from adjacent units.						
Ro	oftop Amenity Spaces						
c.	Design shared rooftop amenity spaces (such as outdoor recreation						
	space and rooftop gardens on the top of a parkade) to be						
	accessible to residents and to ensure a balance of amenity and						
	privacy by:						
•	Limiting sight lines from overlooking residential units to outdoor						1
	amenity space areas through the use of pergolas or covered areas						
	where privacy is desired; and						
•	Controlling sight lines from the outdoor amenity space into						
	adjacent or nearby residential units by using fencing, landscaping,						
	or architectural screening.						
d.	Reduce the heat island affect by including plants or designing a						
	green roof, with the following considerations:						_
•	Secure trees and tall shrubs to the roof deck; and						✓
•	Ensure soil depths and types are appropriate for proposed plants						
	and ensure drainage is accommodated.						
	6 Building Articulation, Features, and Materials	N/A	1	2	3	4	5
a.	3						
	m wide for mixed-use buildings and 20 m wide for residential						
	buildings. Strategies for articulating buildings should consider the						
	potential impacts on energy performance and include:						
•	Façade Modulation – stepping back or extending forward a						
	portion of the façade to create a series of intervals in the façade;						
•	Repeating window pattern intervals that correspond to extensions						
	and step backs (articulation) in the building façade;						
•	Providing a porch, patio, deck, or covered entry for each interval;						✓
•	Providing a bay window or balcony for each interval, while						
	balancing the significant potential for heat loss through thermal						
	bridge connections which could impact energy performance;						
•	Changing the roof line by alternating dormers, stepped roofs,						
	gables, or other roof elements to reinforce the modulation or articulation interval;						
•	Changing the materials with the change in building plane; and						
	Provide a lighting fixture, trellis, tree or other landscape feature						
	within each interval.						
h	Break up the building mass by incorporating elements that define						
٥.	a building's base, middle and top.					,	
Sto	aff comment: The building's top is less defined, however, it is in					✓	
	eping with the building's architectural style.						
c.	Use an integrated, consistent range of materials and colors and						./
	provide variety, by for example, using accent colors.	<u> </u>					V
d.	Articulate the façade using design elements that are inherent to						
	the buildings as opposed to being decorative. For example, create						✓
	depth in building facades by recessing window frames or partially						

	recessing balconies to allow shadows to add detail and variety as a byproduct of massing.				
e.	Incorporate distinct architectural treatments for corner sites and highly visible buildings such as varying the roofline, articulating the façade, adding pedestrian space, increasing the number and size of windows, and adding awnings or canopies.				✓
f. •	Provide weather protection (e.g. awnings, canopies, overhangs, etc.) along all commercial streets and plazas with particular attention to the following locations: Primary building entrances;				
•	Adjacent to bus zones and street corners where people wait for traffic lights; Over store fronts and display windows; and Any other areas where significant waiting or browsing by people				✓
	occurs.				
g.	Architecturally-integrate awnings, canopies, and overhangs to the building and incorporate architectural design features of buildings from which they are supported.				✓
h.	Place and locate awnings and canopies to reflect the building's architecture and fenestration pattern.				✓
i.	Place awnings and canopies to balance weather protection with daylight penetration. Avoid continuous opaque canopies that run the full length of facades.				✓
j.	Avoid the following types of signage:				
•	Internally lit plastic box signs;				\checkmark
•	Pylon (stand alone) signs; and Rooftop signs.				
k.	Uniquely branded or colored signs are encouraged to help				
	establish a special character to different neighbourhoods.			✓
