Planner Initials SS FORM & CHEENOWITA COMMUNITY PLANNING

DEVELOPMENT PERMIT GUIDELINES

Chapter 2 - The Design Foundations: apply to all projects and provide the overarching principles for supporting creativity, innovation and design excellence in Kelowna.

- Facilitate Active Mobility
- Use Placemaking to Strengthen Neighbourhood Identity
- Create Lively and Attractive Streets & Public Spaces
- Design Buildings to the Human Scale
- Strive for Design Excellence

The General Residential and Mixed Use Guidelines: provide the key guidelines that all residential and mixed use projects should strive to achieve to support the Design Foundations.

 The General Guidelines are supplement by typology-specific guidelines (e.g., Townhouses & Infill on page 18-19, High-Rise Residential and Mixed-Use on page 18-42), which provide additional guidance about form and character.

Chapter 2 - Design Foundations Apply To All Projects

Chapter 4 Low & Mid-Rise Residential & Mixed Use

Page 18-34

Chapter 5 High-Rise Residential & Mixed Use

Page 18-42

^{*}Note: Refer to the Design Foundations and the Guidelines associated with the specific building typology.

Consideration has been given to the following guidelines as identified in Chapter 18 of the City of Kelowna 2040 Official Community Plan:

	SECTION 2.0: GENERAL RESIDENTIAL AND MIX	KED US	Ε				
	TE PROPOSALS COMPLIANCE TO PERTINENT GUIDELINE	N/A	1	2	3	4	5
	s least complying & 5 is highly complying)						
	General residential & mixed use guidelines		,	•	•		
	1 Relationship to the Street	N/A	1	2	3	4	5
a.	Orient primary building facades and entries to the fronting street						~
	or open space to create street edge definition and activity.						
b.	On corner sites, orient building facades and entries to both	~					
	fronting streets.						
c.	Minimize the distance between the building and the sidewalk to						~
	create street definition and a sense of enclosure.						
d.	Locate and design windows, balconies, and street-level uses to						\
	create active frontages and 'eyes on the street', with additional						
	glazing and articulation on primary building facades.						
e.	Ensure main building entries are clearly visible with direct sight						\
	lines from the fronting street.						
f.	Avoid blank, windowless walls along streets or other public open			~			
	spaces.						
g.	Avoid the use of roll down panels and/or window bars on retail and	~					
	commercial frontages that face streets or other public open						
	spaces.						
h.	In general, establish a street wall along public street frontages to						~
	create a building height to street width ration of 1:2, with a						
	minimum ration of 11:3 and a maximum ration of 1:1.75.						
•	Wider streets (e.g. transit corridors) can support greater streetwall						
	heights compared to narrower streets (e.g. local streets);						
•	The street wall does not include upper storeys that are setback						
	from the primary frontage; and						
•	A 1:1 building height to street width ration is appropriate for a lane						
	of mid-block connection condition provided the street wall height						
	is no greater than 3 storeys.						
2.1	2 Scale and Massing	N/A	1	2	3	4	5
а.	Provide a transition in building height from taller to shorter					·	
	buildings both within and adjacent to the site with consideration						
	for future land use direction.						
b.	Break up the perceived mass of large buildings by incorporating				~		
	visual breaks in facades.						
C.	Step back the upper storeys of buildings and arrange the massing				~		
	and siting of buildings to:						
•	Minimize the shadowing on adjacent buildings as well as public						
	and open spaces such as sidewalks, plazas, and courtyards; and						
•	Allow for sunlight onto outdoor spaces of the majority of ground						
	floor units during the winter solstice.						
	ss dorning the winter solution	<u> </u>		1	l	<u> </u>	1

2.1	.3 Site Planning	N/A	1	2	3	4	5
a.							~
	opportunities, such as oddly shaped lots, location at prominent						
	intersections, framing of important open spaces, corner lots, sites						
	with buildings that terminate a street end view, and views of						
	natural features.						
b.	Use Crime Prevention through Environmental Design (CPTED)						~
	principles to better ensure public safety through the use of						
	appropriate lighting, visible entrances, opportunities for natural						
	surveillance, and clear sight lines for pedestrians.						
C.	Limit the maximum grades on development sites to 30% (3:1)	~					
d.	Design buildings for 'up-slope' and 'down-slope' conditions						~
	relative to the street by using strategies such as:						
•	Stepping buildings along the slope, and locating building						
	entrances at each step and away from parking access where						
	possible;						
•	Incorporating terracing to create usable open spaces around the						
	building						
•	Using the slope for under-building parking and to screen service						
	and utility areas;						
•	Design buildings to access key views; and						
•	Minimizing large retaining walls (retaining walls higher than 1 m						
	should be stepped and landscaped).						
e.	Design internal circulation patterns (street, sidewalks, pathways)	~					
	to be integrated with and connected to the existing and planed						
	future public street, bicycle, and/or pedestrian network.						
f.	Incorporate easy-to-maintain traffic calming features, such as on-	~					
	street parking bays and curb extensions, textured materials, and						
	crosswalks.						
g.	Apply universal accessibility principles to primary building entries,						~
	sidewalks, plazas, mid-block connections, lanes, and courtyards						
	through appropriate selection of materials, stairs, and ramps as						
	necessary, and the provision of wayfinding and lighting elements.						
2.1	.4 Site Servicing, Access, and Parking	N/A	1	2	3	4	5
a.	Locate off-street parking and other 'back-of-house' uses (such as						~
	loading, garbage collection, utilities, and parking access) away						
	from public view.						
b.	Ensure utility areas are clearly identified at the development					~	
	permit stage and are located to not unnecessarily impact public or						
	common open spaces.						
C.	Avoid locating off-street parking between the front façade of a						~
	building and the fronting public street.						
d.	In general, accommodate off-street parking in one of the						~
	following ways, in order of preference:						
•	Underground (where the high water table allows)						
•	Parking in a half-storey (where it is able to be accommodated to						

•	Garages or at-grade parking integrated into the building (located						
	at the rear of the building); and						
•	Surface parking at the rear, with access from the lane or						
	secondary street wherever possible.						
e.	Design parking areas to maximize rainwater infiltration through						~
	the use of permeable materials such as paving blocks, permeable						
	concrete, or driveway planting strips.						
f.	In cases where publicly visible parking is unavoidable, screen using						~
	strategies such as:						
•	Landscaping;						
•	Trellises;						
•	Grillwork with climbing vines; or						
•	Other attractive screening with some visual permeability.						
g.	Provide bicycle parking at accessible locations on site, including:						~
•	Covered short-term parking in highly visible locations, such as						
	near primary building entrances; and						
•	Secure long-term parking within the building or vehicular parking						
	area.						
h.	1 1 3						~
	servicing, and utility areas to enable casual surveillance and safety.						
i.	Consolidate driveway and laneway access points to minimize curb						~
	cuts and impacts on the pedestrian realm or common open						
	spaces.						
j.	Minimize negative impacts of parking ramps and entrances					~	
j.	through treatments such as enclosure, screening, high quality					~	
	through treatments such as enclosure, screening, high quality finishes, sensitive lighting and landscaping.					~

g.	Plant native and/or drought tolerant trees and plants suitable for the local climate.						~
h.	Select trees for long-term durability, climate and soil suitability, and compatibility with the site's specific urban conditions.						~
i.	Design sites and landscapes to maintain the pre-development flows through capture, infiltration, and filtration strategies, such as the use of rain gardens and permeable surfacing.	~					
j.	Design sites to minimize water use for irrigation by using strategies such as:	~					
•	Designing planting areas and tree pits to passively capture rainwater and stormwater run-off; and						
k.	Using recycled water irrigation systems. Create multi-functional landscape elements wherever possible, such as planting areas that also capture and filter stormwater or landscape features that users can interact with.	~					
I.	Select materials and furnishings that reduce maintenance requirements and use materials and site furnishings that are sustainably sourced, re-purposed or 100% recycled.					~	
m.	Use exterior lighting to complement the building and landscape design, while:					~	
•	Minimizing light trespass onto adjacent properties; Using full cut-off lighting fixtures to minimize light pollution; and Maintaining lighting levels necessary for safety and visibility.						
n.	Employ on-site wayfinding strategies that create attractive and appropriate signage for pedestrians, cyclists, and motorists using	~					
	a 'family' of similar elements.						
2.1	a 'family' of similar elements. .6 Building Articulation, Features and Materials	N/A	1	2	3	4	5

	ornamental features and art work; architectural lighting; grills and railings; substantial trim details and moldings / cornices; and				
	trellises, pergolas, and arbors.				
C.	Design buildings to ensure that adjacent residential properties			\	
	have sufficient visual privacy (e.g. by locating windows to				
	minimize overlook and direct sight lines into adjacent units), as				
	well as protection from light trespass and noise.				
d.	Design buildings such that their form and architectural character				/
	reflect the buildings internal function and use.				
e.	Incorporate substantial, natural building materials such as			<	
	masonry, stone, and wood into building facades.				
f.	Provide weather protection such as awnings and canopies at				~
	primary building entries.				
g.	Place weather protection to reflect the building's architecture.				>
h.	Limit signage in number, location, and size to reduce visual clutter				/
	and make individual signs easier to see.				
i.	Provide visible signage identifying building addresses at all				~
	entrances.				

	SECTION 4.0: LOW & MID-RISE RESIDENTIAL MIXED USE									
RAT	E PROPOSALS COMPLIANCE TO PERTINENT GUIDELINE	N/A	1	2	3	4	5			
	least complying & 5 is highly complying)									
	4.1 Low & mid-rise residential & mixed use guidelines									
-	Relationship to the Street	N/A	1	2	3	4	5			
	Ensure lobbies and main building entries are clearly visible from						~			
	he fronting street.									
_	Avoid blank walls at grade wherever possible by:			~						
	ocating enclosed parking garages away from street frontages or									
	public open spaces;									
	Jsing ground-oriented units or glazing to avoid creating dead									
	rontages; and									
	When unavoidable, screen blank walls with landscaping or									
	ncorporate a patio café or special materials to make them more									
	risually interesting.									
	dential & Mixed Use Buildings	1	1			1	1			
	Set back residential buildings on the ground floor between 3-5 m						~			
	rom the property line to create a semi-private entry or transition									
	zone to individual units and to allow for an elevated front									
	entryway or raised patio.									
	A maximum 1.2 m height (e.g. 5-6 steps) is desired for front									
	entryways.									
	Exceptions can be made in cases where the water table requires									
	his to be higher. In these cases, provide a larger patio and screen									
F	parking with ramps, stairs and landscaping.									

I.	Incorporate individual entrances to ground floor units accessible						
''	from the fronting street or public open spaces.						
m	Site and orient buildings so that windows and balconies overlook						~
	public streets, parks, walkways, and shared amenity spaces while						Ť
	minimizing views into private residences.						
4.1	.2 Scale and Massing	N/A	1	2	3	4	5
a.	Residential building facades should have a maximum length of 60	14,71	_	_	٦	<u>-</u>	3
۵.	m. A length of 40 m is preferred.					*	
b.	Residential buildings should have a maximum width of 24 m.						_
C.	Buildings over 40 m in length should incorporate a significant					_	·
	horizontal and vertical break in the façade.					ľ	
d.	For commercial facades, incorporate a significant break at	/					
<u> </u>	intervals of approximately 35 m.	•					
4.1	3 Site Servicing, Access, and Parking	N/A	1	2	3	4	5
a.		1 1,7 1	_	_	,	-	<i>.</i>
<u>.</u>	and avoid the creation of blank walls.					Ľ	
b.	Site buildings to be parallel to the street and to have a distinct						~
	front-to-back orientation to public street and open spaces and to						
	rear yards, parking, and/or interior court yards:						
•	Building sides that interface with streets, mid-block connections						
	and other open spaces and should positively frame and activate						
	streets and open spaces and support pedestrian activity; and						
•	Building sides that are located away from open spaces (building						
	backs) should be designed for private/shared outdoor spaces and						
	vehicle access.						
C.	Break up large buildings with mid-block connections which should				~		
	be publicly-accessible wherever possible.						
d.	Ground floors adjacent to mid-block connections should have						~
	entrances and windows facing the mid-block connection.						
4.1	.4 Site Servicing, Access and Parking	N/A	1	2	3	4	5
a.	Vehicular access should be from the lane. Where there is no lane,						~
	and where the re-introduction of a lane is difficult or not possible,						
	access may be provided from the street, provided:						
•	Access is from a secondary street, where possible, or from the						
	long face of the block;						
•	Impacts on pedestrians and the streetscape is minimised; and						
•	There is no more than one curb cut per property.						
b.	Above grade structure parking should only be provided in	~					
	instances where the site or high water table does not allow for						
	other parking forms and should be screened from public view with						
	active retail uses, active residential uses, architectural or						
	landscaped screening elements.						
C.	Buildings with ground floor residential may integrate half-storey	~					
	underground parking to a maximum of 1.2 m above grade, with						
	the following considerations:						
	J			1	1	1	

•	Semi-private spaces should be located above to soften the edge						
	and be at a comfortable distance from street activity; and						
•	Where conditions such as the high water table do not allow for this						
	condition, up to 2 m is permitted, provided that entryways, stairs,						
	landscaped terraces, and patios are integrated and that blank						
	walls and barriers to accessibility are minimized.						
4.1	.5 Publicly-Accessible and Private Open Spaces	N/A	1	2	3	4	5
a.	Integrate publicly accessible private spaces (e.g. private					-	~
	courtyards accessible and available to the public) with public open						
	areas to create seamless, contiguous spaces.						
b.	Locate semi-private open spaces to maximize sunlight						~
	penetration, minimize noise disruptions, and minimize 'overlook'						
	from adjacent units.						
Ου	tdoor amenity areas						
C.	Design plazas and urban parks to:					/	
•	Contain 'three edges' (e.g. building frontage on three sides) where						
	possible and be sized to accommodate a variety of activities;						
•	Be animated with active uses at the ground level; and						
•	Be located in sunny, south facing areas.						
d.	Design internal courtyards to:						~
•	Provide amenities such as play areas, barbecues, and outdoor						
	seating where appropriate.						
•	Provide a balance of hardscape and softscape areas to meet the						
	specific needs of surrounding residents and/or users.						
e.	Design mid-block connections to include active frontages, seating						~
	and landscaping.						
	oftop Amenity Spaces	1	1	T	1		1
f.	Design shared rooftop amenity spaces (such as outdoor recreation						~
	space and rooftop gardens on the top of a parkade) to be						
	accessible to residents and to ensure a balance of amenity and						
	privacy by:						
•	Limiting sight lines from overlooking residential units to outdoor						
	amenity space areas through the use of pergolas or covered areas						
	where privacy is desired; and						
•	Controlling sight lines from the outdoor amenity space into						
	adjacent or nearby residential units by using fencing, landscaping,						
	or architectural screening.						
g.	Reduce the heat island affect by including plants or designing a	~					
	green roof, with the following considerations:						
•	Secure trees and tall shrubs to the roof deck; and						
•	Ensure soil depths and types are appropriate for proposed plants						
	and ensure drainage is accommodated.	NI/A	_				_
	.6 Building Articulation, Features, and Materials	N/A	1	2	3	4	5
a.	Articulate building facades into intervals that are a maximum of 15 m wide for mixed-use buildings and 20 m wide for residential					~	
	buildings. Strategies for articulating buildings should consider the						
	potential impacts on energy performance and include:						
	potential impacts on energy performance and inclode.	1	L	<u> </u>	1		Ì

•	Façade Modulation – stepping back or extending forward a					
	portion of the façade to create a series of intervals in the façade;					
•	Repeating window pattern intervals that correspond to extensions					
	and step backs (articulation) in the building façade;					
•	Providing a porch, patio, deck, or covered entry for each interval;					
•	Providing a bay window or balcony for each interval, while					
	balancing the significant potential for heat loss through thermal					
	bridge connections which could impact energy performance;					
•	Changing the roof line by alternating dormers, stepped roofs,					
	gables, or other roof elements to reinforce the modulation or					
	articulation interval;					
•	Changing the materials with the change in building plane; and					
	Provide a lighting fixture, trellis, tree or other landscape feature within each interval.					
b.	Break up the building mass by incorporating elements that define			~		
	a building's base, middle and top.					
C.	Use an integrated, consistent range of materials and colors and					~
	provide variety, by for example, using accent colors.		1			
d.	Articulate the façade using design elements that are inherent to				~	
	the buildings as opposed to being decorative. For example, create					
	depth in building facades by recessing window frames or partially					
	recessing balconies to allow shadows to add detail and variety as a					
	by product of massing.					
e.	Incorporate distinct architectural treatments for corner sites and				~	
	highly visible buildings such as varying the roofline, articulating the façade, adding pedestrian space, increasing the number and					
	size of windows, and adding awnings or canopies.					
f.	Provide weather protection (e.g. awnings, canopies, overhangs,					~
l ''	etc.) along all commercial streets and plazas with particular					~
	attention to the following locations:					
•	Primary building entrances;,					
•	Adjacent to bus zones and street corners where people wait for					
	traffic lights;					
•	Over store fronts and display windows; and					
•	Any other areas where significant waiting or browsing by people					
	occurs.					
g.	Architecturally-integrate awnings, canopies, and overhangs to the					~
	building and incorporate architectural design features of buildings					
	from which they are supported.					
h.	Place and locate awnings and canopies to reflect the building's					~
	architecture and fenestration pattern.					
i.	Place awnings and canopies to balance weather protection with				\	
	daylight penetration. Avoid continuous opaque canopies that run					
	the full length of facades.		1			
j.	Provide attractive signage on commercial buildings that identifies	~				
	uses and shops clearly but which is scaled to the pedestrian rather					
	than the motorist. Some exceptions can be made for buildings					

	located on highways and/or major arterials in alignment with the				
	City's Sign Bylaw.				
k.	Avoid the following types of signage:	/			
•	Internally lit plastic box signs;				
•	Pylon (stand alone) signs; and				
•	Rooftop signs.				
I.	Uniquely branded or colored signs are encouraged to help				~
	establish a special character to different neighbourhoods.
